

Mars Hill Church is a large multi campus church in the Seattle area. We helped them completely renovate an existing church building in West Seattle for their new campus there. The remodel included almost all of the nearly 50,000 SF of building area on all 3 floors.

One important factor was the project schedule. In order to minimize the review time at the building department, we divided the project into 5 phases, each small and simple enough to allow for an expedited permit review.

There was also a high degree of integration of technology into the design, including satellite feed to the main campus, a sophisticated A/V system, and an elaborate theatrical lighting truss system that can be lowered for easy access to change lights.
